

CONCRETE SAMPLE TREATED WITH

Sample not treated, section

Sample treated, section

Sample treated, section. The section of the sample show how the product applied to the surface reaches a considerable depth and leaves only a nucleus of few centimeters at the centre of the sample.

Sample treated.

The photo refers to the area of the sample not reached by waterproofing.

Image to SEM, 640 x.

Sample treated.

It is possible to observe how the mortar's micropores are filled by the product, that guarantees, therefore, a good waterproofing of the material.
